## Math 195 Quiz 8A March 18, 2019

	Complete the following	rules:			
	(a) $x^n \cdot x^m =$	(b) $x^{-a} =$	(c) $x^{m/n} =$	(d) $\frac{x^n}{x^m} =$	
	(e) $x^2 - y^2 = $		(f) $x^3 - y^3 =$		
	Suppose $(x_1, y_1)$ and $(x_2, y_2)$ lie on a straight line. For this line:				
	(a) Write an <b>equation</b> that gives its slope:				
	(b) Write down the <i>point-slope form</i> <b>equation</b> of the line:				
	(b) Write down the point	nt-slope form <b>equation</b> o	of the line:		-
			on of the line:		
	(c) Write down the <i>slop</i>	e-intercept form <b>equatio</b>			
	(c) Write down the <i>slop</i> Suppose $m_1$ and $m_2$ are if:	e-intercept form <b>equation</b> the slopes of two non-v	<b>on</b> of the line:	ationship between thei	
	(c) Write down the <i>slop</i> Suppose $m_1$ and $m_2$ are if: (a) They are parallel: Identify the given function	the slopes of two non-v (b) (b) ons as "odd", "even" or "	<b>on</b> of the line: ertical lines. What is the rela ) They are perpendicular: "neither" by filling out the ta	ationship between thei able. Also state what ki	r slopes
•	<ul> <li>(c) Write down the <i>slop</i></li> <li>Suppose m<sub>1</sub> and m<sub>2</sub> are if:</li> <li>(a) They are parallel:</li> <li>Identify the given function the function has. If it is n</li> <li>Function</li> </ul>	the slopes of two non-v (b) (b) ons as "odd", "even" or "	on of the line: ertical lines. What is the rela ) They are perpendicular: "neither" by filling out the ta ter "N/A" in the symmetry o	ationship between thei able. Also state what ki	r slopes
•	<ul> <li>(c) Write down the <i>slop</i></li> <li>Suppose m<sub>1</sub> and m<sub>2</sub> are if:</li> <li>(a) They are parallel:</li> <li>Identify the given function the function has. If it is not state the function has. If it is not state the function has.</li> </ul>	the slopes of two non-v (b) (b) ons as "odd", "even" or f neither even nor odd, en	on of the line: ertical lines. What is the rela ) They are perpendicular: "neither" by filling out the ta ter "N/A" in the symmetry o	ationship between thei 	r slopes
	<ul> <li>(c) Write down the <i>slop</i></li> <li>Suppose m<sub>1</sub> and m<sub>2</sub> are if:</li> <li>(a) They are parallel:</li> <li>Identify the given function the function has. If it is n</li> <li>Function</li> </ul>	the slopes of two non-v (b) ons as "odd", "even" or ' heither even nor odd, en Odd/Even/Neither	on of the line: ertical lines. What is the rela ) They are perpendicular: "neither" by filling out the ta ter "N/A" in the symmetry o	ationship between thei able. Also state what ki olumn. netric about?	r slopes

- (a) Slope = 3: \_\_\_\_\_\_ (b) vertical: \_\_\_\_\_
- (c) Horizontal: \_\_\_\_\_ (d) perpendicular to 2x + 3y = 1: \_\_\_\_\_
- **6.** Graph 3x 4y = 12, indicate two points on the graph:

Bonus (after attempting the problems above, do these for extra credit):

1. Let 
$$f(x) = \begin{cases} 1 - x^2, & x \le -1 \\ 2 + x, & -1 < x < 3 \\ 3, & 3 \le x < 5 \\ x + 1, & x > 5 \end{cases}$$
. Evaluate  $f(x)$  at the indicated x-values:  
(a)  $f(-2) =$ \_\_\_\_\_ (b)  $f(4) =$ \_\_\_\_\_ (c)  $f(5) =$ \_\_\_\_\_
