COURSE LEARNING OUTCOMES

DEPARTMENT: MATHEMATICS

COURSE #: 15000
COURSE TITLE: Mathematics for the Contemporary World
CATEGORY: Required for BA students unless Pre-calculus is taken
TERM OFFERED: every term
PRE-REQUISITES: None
PRE/CO-REQUISITES: None
HOURS/CREDITS: 3 hr./wk. 3 credits
DATE EFFECTIVE: January 18, 2007
COURSE COORDINATOR: Rochelle H. Ring

CATALOG DESCRIPTION
Bombarded by statistics, assailed by advertisers and advocates of all persuasions, the average person needs mathematics to make sense of the world. This course aims to give students the tools needed to critically examine the quantitative issues of our times. Students will learn the basics of logical reasoning, using graphs and algebra to create quantitative models and the role of statistics and probability in analyzing data. We will apply these ideas to assess the quantitative claims raised in contemporary case studies commonly discussed in the media.

COURSE LEARNING OUTCOMES
Please describe below all learning outcomes of the course, and indicate the letter(s) of the corresponding Departmental Learning Outcome(s) (see list at bottom) in the column at right.

After taking this course the student should be able to:

1. identify fallacious arguments and test the validity of an argument by the use of Venn diagrams or the laws of logic.  
   Contributes to Departmental Learning Outcome(s):
   c

2. solve quantitative problems by identifying units and use rules for operations on quantities with units to solve ‘real-world’ problems.  
   Contributes to Departmental Learning Outcome(s):
   a, c, d

3. convert among standardized units and solve complex ‘real-world’ problems using a calculator.  
   Contributes to Departmental Learning Outcome(s):
   a, c, d

4. interpret and calculate in examples with subtle uses of percentages describing change or comparison in examples drawn from media sources.  
   Contributes to Departmental Learning Outcome(s):
   a, c, d

5. interpret and manipulate very large/small numbers including the use of scale ratios.  
   Contributes to Departmental Learning Outcome(s):
   a, c, d

6. identify types of studies and sampling methods and evaluate sources of bias in statistical studies.  
   Contributes to Departmental Learning Outcome(s):
   c

7. construct and interpret statistical graphs and tables and extract data from graphics from media sources.  
   Contributes to Departmental Learning Outcome(s):
   a, c, d

8. characterize data distributions using measures of central tendency and variation and solve problems involving normally distributed data.  
   Contributes to Departmental Learning Outcome(s):
   a, c, d

9. create and use functions to model linear processes.  
   Contributes to Departmental Learning Outcome(s):
   a, b, c, d

10. contrast linear and exponential growth/decay, identifying situations in which each occurs.  
    Contributes to Departmental Learning Outcome(s):
    a, b, c, d

11. convert between percentage rates (for growth/decay) and doubling(or halving) times and solve problems involving exponential change.  
    Contributes to Departmental Learning Outcome(s):
    a, c, d

Note: CLO d (use of technology) is limited to the use of the calculator

DEPARTMENTAL LEARNING OUTCOMES (to be filled out by departmental mentor)

a. perform numeric and symbolic computations
b. construct and apply symbolic and graphical representations of functions
c. model real-life problems mathematically
d. use technology appropriately to analyze mathematical problems
e. state (e1) and apply (e2) mathematical definitions and theorems
f. prove fundamental theorems
g. construct and present (generally in writing, but, occasionally, orally) a rigorous mathematical argument.
