+ 3 Bonus points possible!

Name: ANSWERS

Instructions: No calculators. Use your own scrap paper and write your answers in the space provided.

1. Suppose $\int_a^b f(x) dx$ is an integral in which $f(x)$ is a rational expression of trig functions.

(a) State the traditional Weierstrass substitution: $u = \underline{\tan \frac{x}{2}}$

(b) Using this substitution, derive or state $\sin x = \underline{\frac{2u}{1+u^2}}$ as a function of u

(c) Using this substitution, derive or state $\cos x = \underline{\frac{1-u^2}{1+u^2}}$ as a function of u

(d) Using this substitution, derive or state $dx = \underline{\frac{2}{1+u^2} du}$ in terms of du

(e) Compute: $\int \frac{1}{\tan x + \sin x} dx = \underline{\frac{1}{2} \left(\ln \left| \tan \frac{x}{2} \right| - \frac{\tan^2 \frac{x}{2}}{2} \right) + C}$

2. Integrate the following:

(a) $\int \frac{4x}{(1-4x)^3} dx = \underline{\frac{1}{4} \left(\frac{1}{2(1-4x)^2} - \frac{1}{1-4x} \right) + C}$ (b) $\int \frac{x^2 + 7x + 6}{x^2 + x + 3} dx = \underline{x + 3 \ln |x^2 + x + 3| + C}$

(c) $\int \frac{5}{x^2 - x - 6} dx = \underline{\ln |x-3| - \ln |x+2| + C}$ OR $\underline{\ln \left| \frac{x-3}{x+2} \right| + C}$

Bonus:

1. Consider the integral $\int_a^b f(x) dx$. What three things will make the integral improper?

(i) $\underline{f(x) \text{ is discontinuous at finitely many points in } [a,b]}$

(ii) $\underline{a = -\infty}$

(iii) $\underline{b = \infty}$
