

Name: ANSWERS

Instructions: No calculators! Answer all problems in the space provided! Do your rough work on scrap paper.

1. Complete the following rules:

(a) $x^n \cdot x^m = x^{n+m}$ (b) $x^{-a} = \frac{1}{x^a}$ (c) $x^{m/n} = \sqrt[n]{x^m}$ (d) $\frac{x^n}{x^m} = x^{n-m}$

(e) $x^2 - y^2 = (x-y)(x+y)$ (f) $x^3 - y^3 = (x-y)(x^2 + xy + y^2)$

2. Graph the following, indicate all intercepts and asymptotes, provided they exist. Show their values on your sketch:

(d) $y = -\ln(x+1) + 2$

(e) $y = (1-x)(2-x)(x+1)^2$

Bonus (after attempting the problems above, do these for extra credit):

1. Simplify: $e^{\ln x^2 - 5 \ln y} = \frac{x^2}{y^5}$

2. Solve for x : $\ln x = 9 \Rightarrow x = e^9$

3. Suppose a bank account grows at an interest rate of r per year, and suppose the interest is compounded continuously. If $P(t)$ represent the balance in the account after time t , and the initial principal is P_0 , write down a formula for $P(t)$:

$P(t) = P_0 e^{rt}$
